Windows Personalization

Windows 8 makes it easy to customize the look and feel of the Desktop view. You’ll learn how to access the Personalization pane, which allows you to customize the theme, background image, and color of your Desktop. You'll also learn how to adjust your font size and text display.
Personalizing smart screen

To access the Personalization pane, right-click anywhere on the Desktop, and then select Personalize from the drop-down menu. The Personalization pane will appear.

In the above screenshot hit on personalize to edit the background to see lot more options related to personalization.

By hitting on personalize we get the below window.
Click the buttons on above screenshot, this Personalization pane to customize the appearance of the Desktop view.
Font Size and text Display settings

You can also use the Personalization pane to customize the font size and text display. Again, it's important to note that these settings will only affect the Desktop view, not the Start screen. To change the font click on the display like in the below screenshot.

Locate and select Display in the lower-left corner of the Personalization pane. The Display settings will appear. Choose the desired size. Note that a larger size may interfere with the way some items appear on the screen.
Below screenshot shows how to select the small, medium and large text size.

Click apply to save your changes. You also may need to restart your computer for these changes to take place.
To adjust clear type settings

Clear type helps improve the readability of text on LCD monitors and screens. Locate and select Display in the lower-left corner of the Personalization pane. The Display settings will appear.

Select Adjust Clear Type text from the left-navigation menu. Which is clearly shown in the below screenshot.
The Clear Type Text Tuner dialog box will appear. Follow the instructions, choosing the text that appears best to you. You can see that in the below screenshot.
In the above screenshot you can select the best pattern you want to see the screen with text. These are the best options for the window.
