Using your Antivirus

SCEP Antivirus

The Universities standard Antivirus application is the System Center Endpoint Protection (SCEP) by Microsoft.

**Note:** Not all computers may have SCEP. Some older computer may still run the McAfee antivirus.
Ensuring your AV is up to date

Bring your mouse over to the green icon on the notification area of your taskbar.

Hover the mouse pointer over the icon and click Open the Antivirus.

Here you can see when your antivirus was updated last. There is an automatic update that runs every 24 hours and you shouldn’t be behind by more than a day. You can manually update anytime by clicking the Update button.
View quarantined items

Click on the History tab and select *Quarantined Items*

Click on View details
If you have any threats that were detected and quarantined, they will show up here. You may then choose to remove any quarantined items if you wish.
Run a virus scan

In the Home tab, you have the option to run a virus scan on your computer.

- A quick scan will scan for the most obvious threats.
- A full scan will scan every piece of data on your computer and any connected devices for threats.
- A custom scan allows you to choose a specific folder or drive to scan.
